*Impulse for the outreach session of the GJETC,*

*6<sup>th</sup> September, 2017*

*At IEEJ, Tokyo*

# Global pathway to zero emissions: Efficiency + Renewables

## IEA Current Policy (CP) vs. Energy (r)evolution (E(R))

Source: DLR 2015

# “Efficiency first” (IEA): Reduce losses of the global energy system....

...by the “energy efficiency revolution” and decentralized power

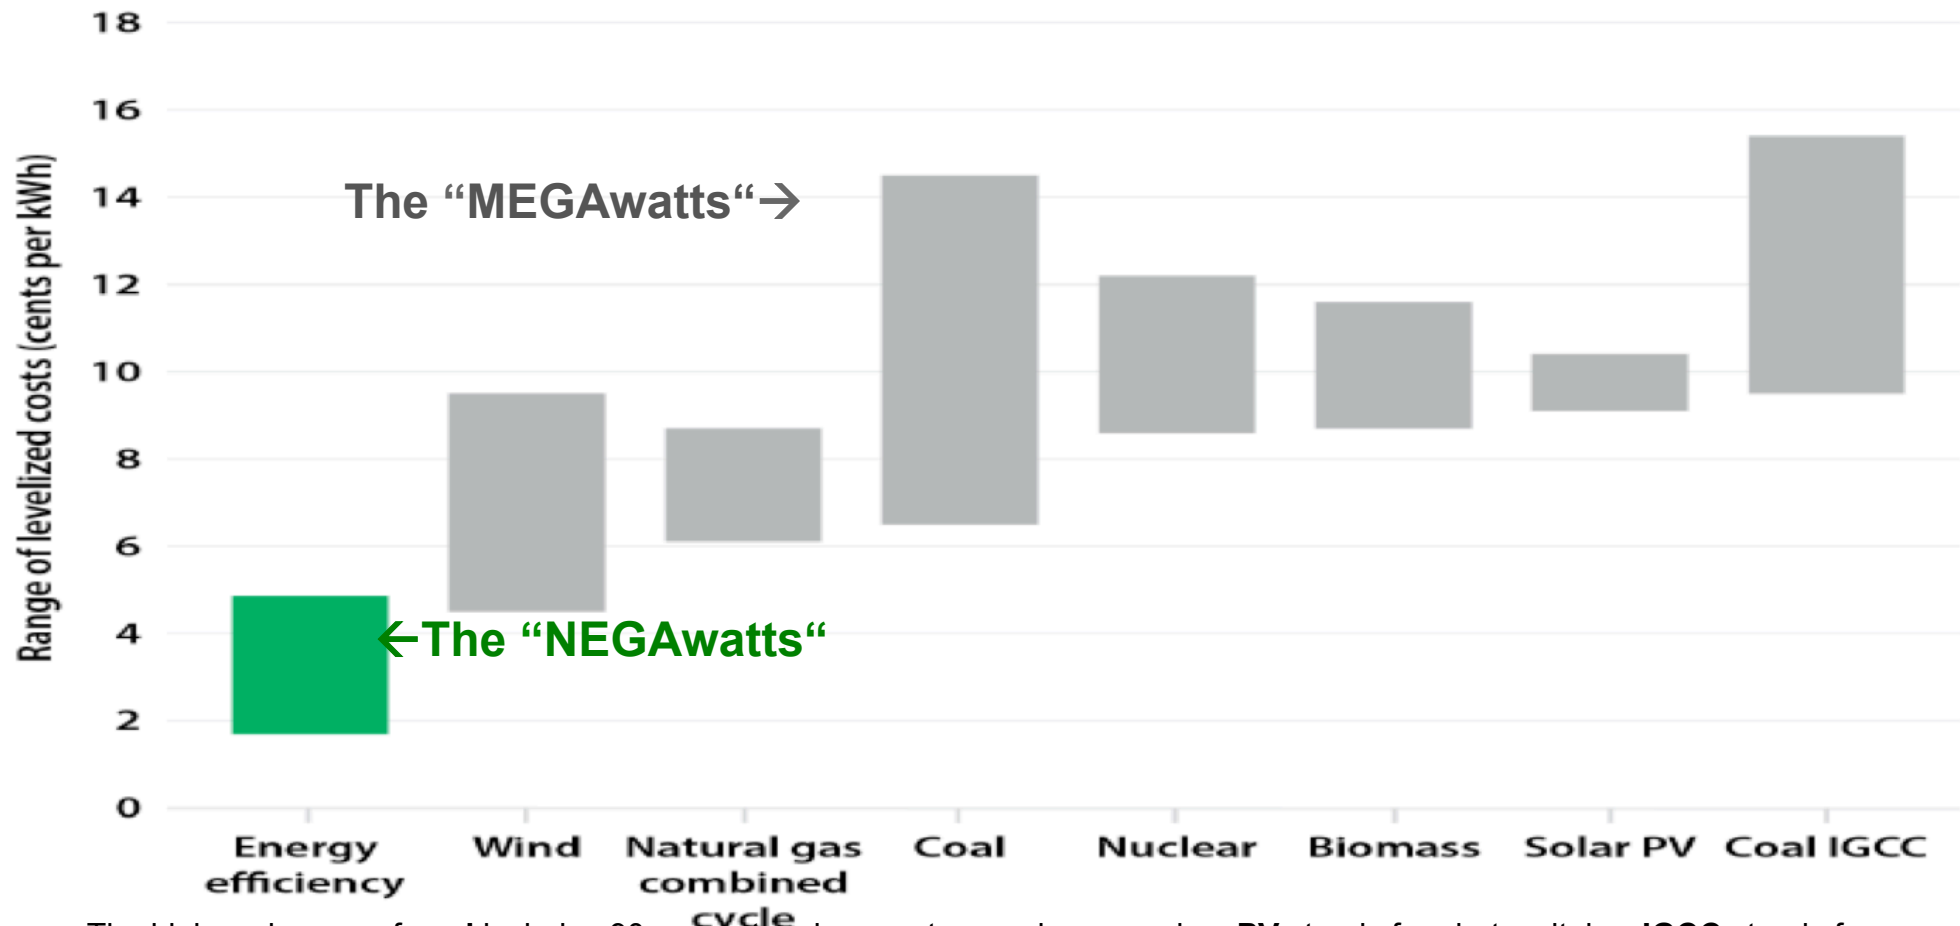

\*Total primary Energy 519 EJ less 32 EJ non energetic consumption

Source: Hennicke/Grasekamp 2014; based on Jochem/Reize 2013; figures from IEA/OECD/IREES

# US: Cost of utility efficiency programs (average: 2.8 cents per kWh)

A factor of 50-75% less than levelized costs of new power supply

The high-end range of **coal** includes 90 percent carbon capture and ompression. **PV** stands for photovoltaics. **IGCC** stands for integrated gesification combined cycle, a technology that converts coal into a synthesis gas and produces steam.

Source: ACEE 2014. Energy efficiency portfolio data from Molina 2014; all other data from Lazard 2013.

# Cost reductions of key technologies for decentralized supply and use of energy

Notes: Land based wind costs derived from levelized cost of energy from representative wind sites from references [1] and [2]. Distributed PV is average residential installed cost from reference [3]. Utility-Scale PV is median installed cost for utility-scale PV systems from reference [4]. Modeled battery costs are at high-volume production of battery systems, derived from DOE/UIS Advanced Battery Consortium PHEV Battery development projects. LED bulbs are for A-type bulbs from reference [5].

# “Revolutionary Targets” (Chancellor Merkel)

## Energy Concept, Federal German Government, 09/2010

	2014	2015	2020	2030	2040	2050
<b>Greenhouse gas emissions</b>						
Greenhouse gas emissions (compared to 1990)	-27.7 %	-27.2 %	minimum -40 %	min -55 %	min -70 %	min -80 to 95 %
<b>Increase in share of renewable energy in final energy consumption</b>						
Share in gross final energy consumption	13.6 %	14.9 %	18 %	30 %	45 %	60 %
Share in gross power consumption	27.3 %	31.6 %	min 35 %	min 50 % (2025: 40-45 %)	min 65 % (2035: 55-60 %)	min 80 %
Share in heat consumption	12.5 %	13.2 %	14 %			
Share in transport sector	5.6 %	5.2 %	10 % (EU goal)			
<b>Reduction of energy consumption and increase in energy efficiency</b>						
Primary energy consumption (compared to 2008)	-8.3 %	-7.6 %	-20 %			-50 %
Final energy productivity	1.6 % per year (2008-2014)	1.3 % per year (2008-2015)		2.1 % per year (2008-2050)		
Gross electricity consumption (compared to 2008)	-4.2 %	-4 %	-10 %			-25 %
Primary energy demand buildings (compared to 2008)	-19.2 %	-15.9 %				around -80 %
Heat demand buildings (compared to 2008)	-14.7 %	-11.1 %	-20 %			
Final energy consumption transport (compared to 2005)	1.1 %	1.3 %	-10 %			-40 %

# Research consensus in Germany: The Energiewende is feasible and attractive!

→ absolute decoupling of GDP (quality of life) and energy is possible

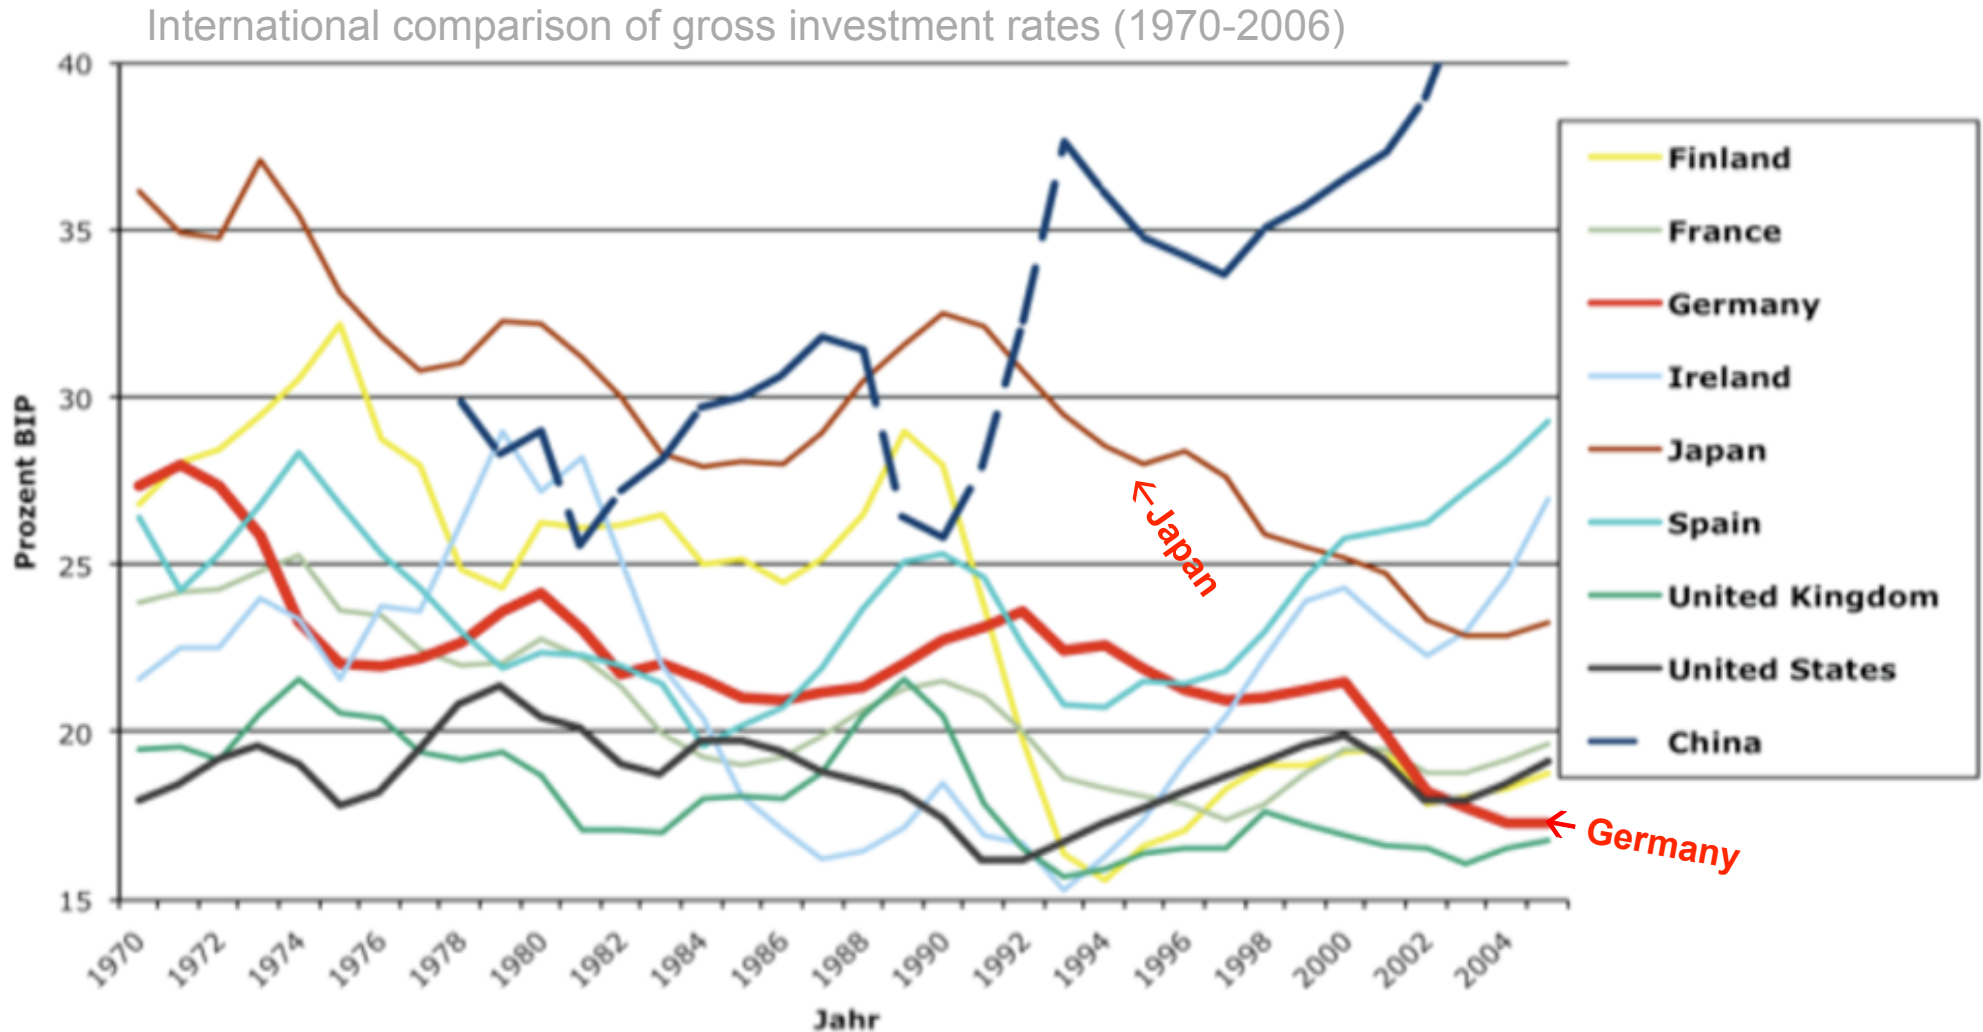

Source: Particular scenario studies and AG Energiebilanzen 2015

## Questions on different views in Germany and Japan:

- **Ambitious climate mitigation: cost or benefit for the economy?**
- **Costs of PV and wind power?**
- **More base load or more flexibility options?**
- **Perception of decentralisation and ownership?**
- **Potentials and policies on energy efficiency?**
- **Future role of incumbent power suppliers?**
- **Public acceptance of the energy transition?**
- **Perception of economic growth, lifestyles and sufficiency?**

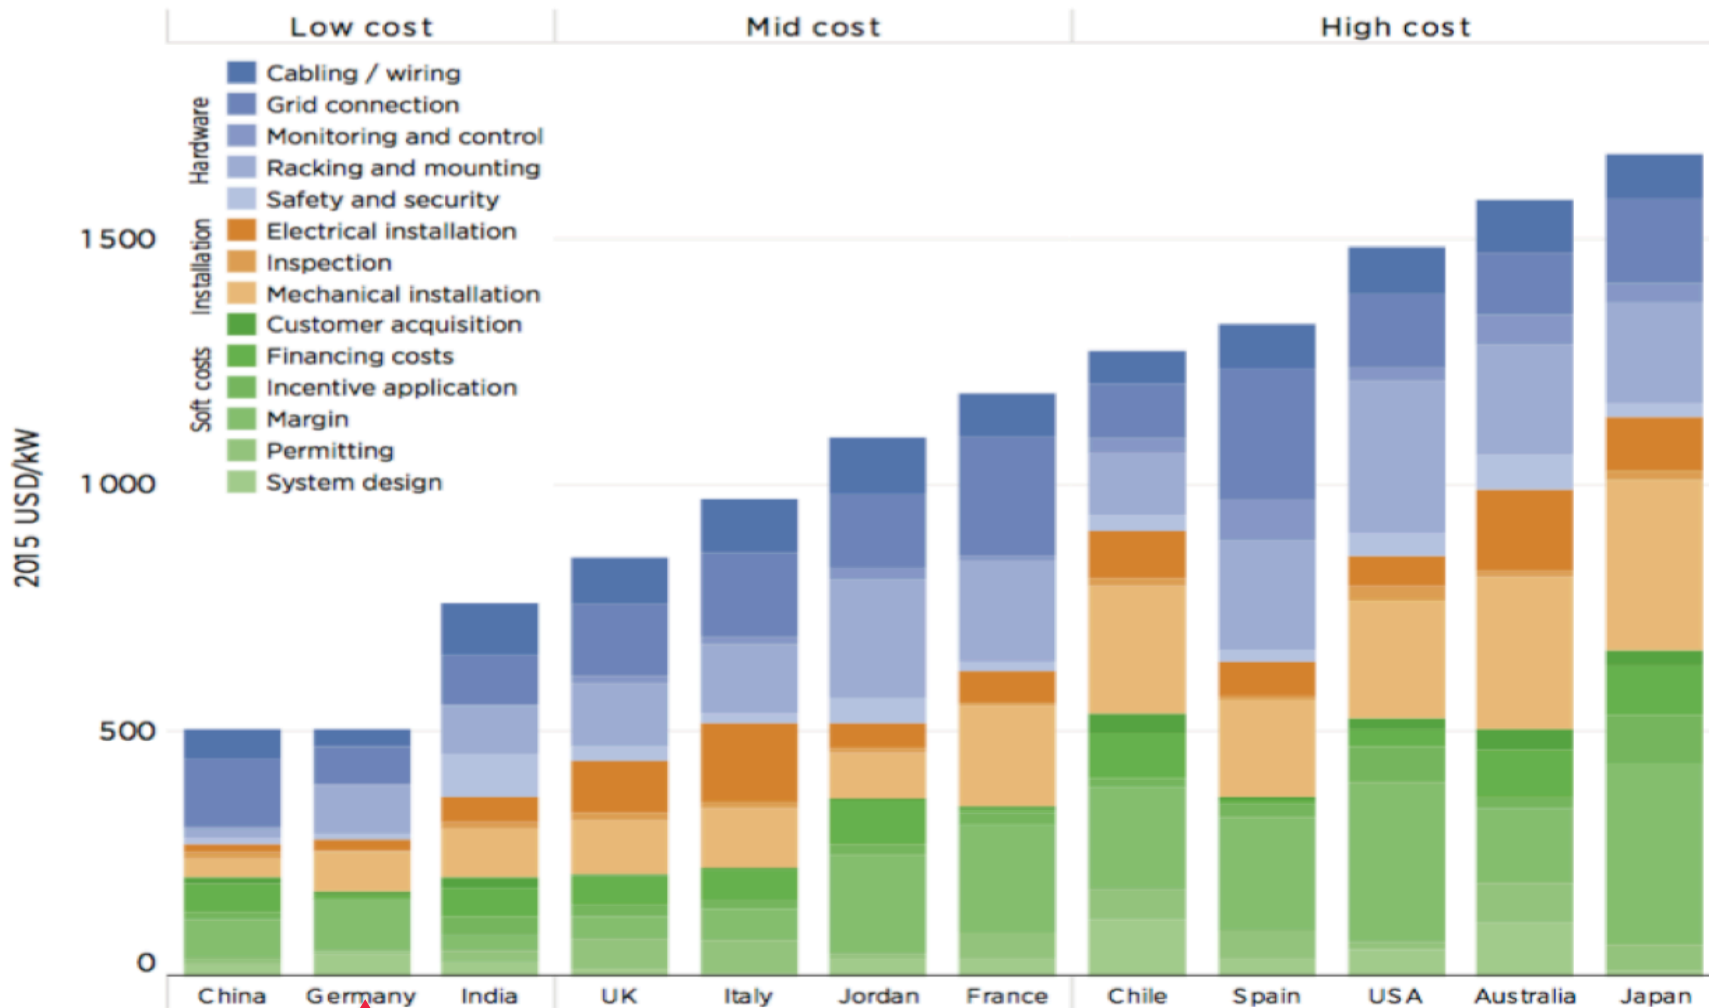

# Additional investments in climate and resource protection – A core strategy to foster innovations and green growth

Source: C. Jäger, PIK, 2009.

# Astonishing global differences of PV costs (2015)

= great cost reduction potential in Japan

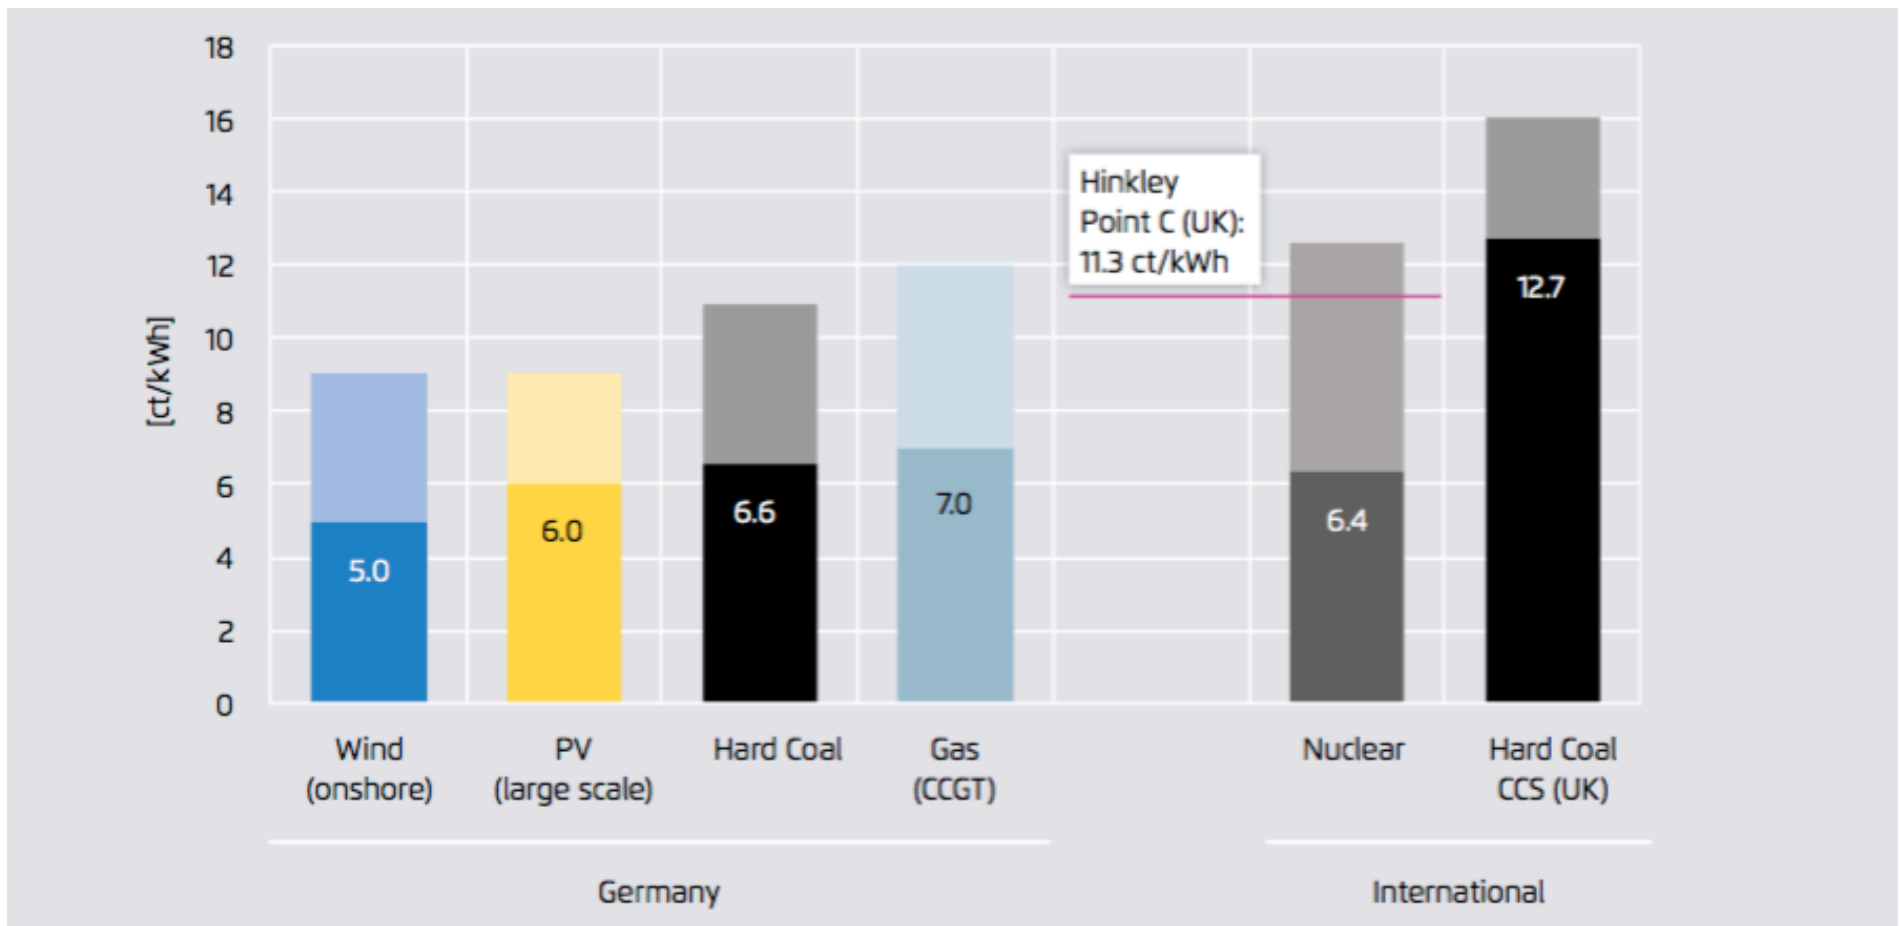

Source: IRENA Renewable Cost Database.

Source: IRENA 2016

# Range of current green power costs in Germany

→ in comparison to new nuclear and coal/CCS (UK)

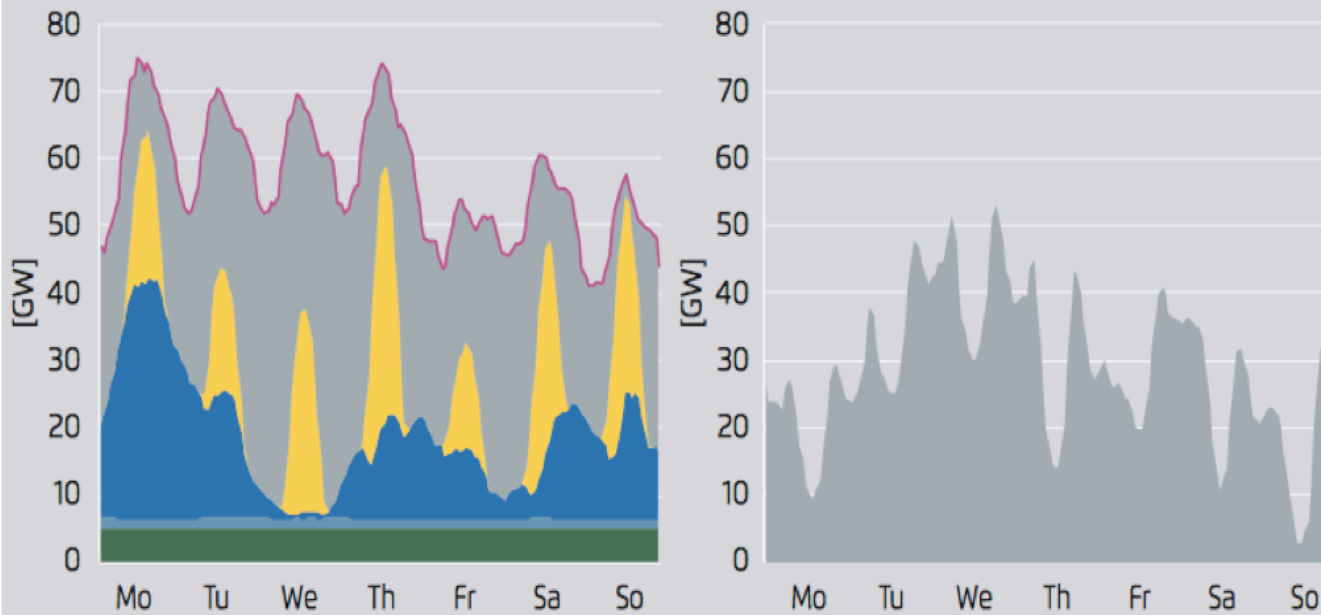

Agora Energiewende (2014), DECC (2013), enervis (2015), EDF, own calculations. The LCOE is a metric used to compare the generation costs (EUR/kWh) of different technologies, taking into account fixed and variable costs, as well as cost of capital (WACC). In general, feed-in tariffs are slightly higher than the LCOE, as energy producers usually include revenue margins in their calculations.

# The challenge: Gross electricity generation and fluctuating residual load in Germany

Forget base load – raise flexibility for security of supply!

## One typical week in April 2022 with 50% renewables:

### Key flexibility options

- Flexible operation of thermal power plants
- Grids and transmission capacities for Import/Export
- Demand Side Management
- Storage (Batteries, Power-to-X)
- Further Integration of the electricity, heating and transport sector

# Decarbonization technologies are decentralized: Ownership of installed renewables power in Germany 2010

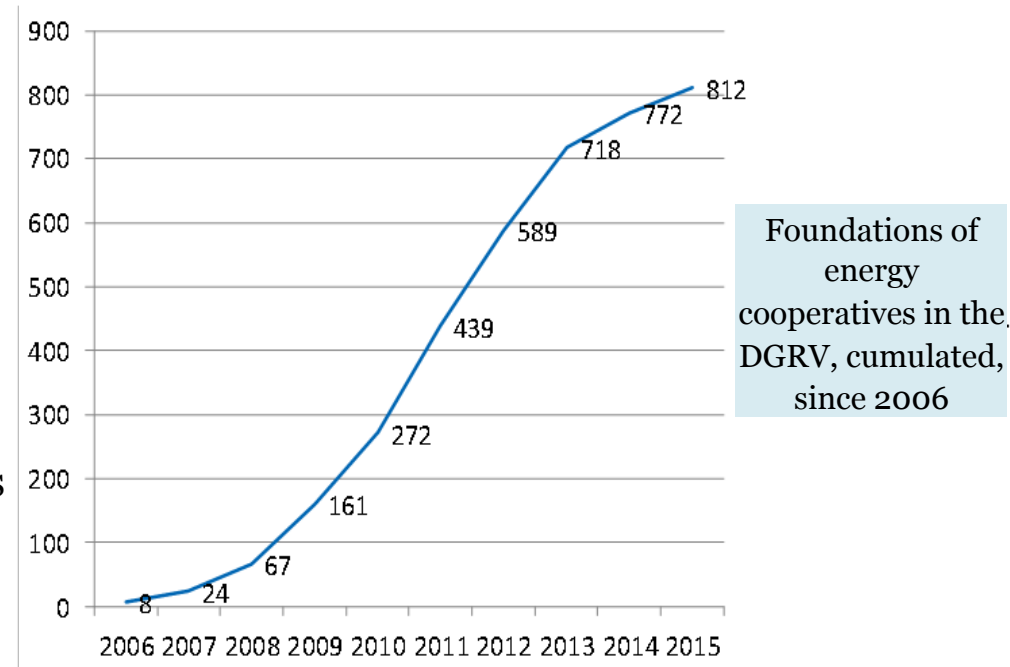

Source: Greenpeace International 2013

# Citizen financed energy cooperatives

## Status and development of an unexpected surprise!

- **Overall: 812 cooperatives have been founded since 2006**
  - with 165 000 citizens
  - 655 million Euro member's capital
  - 1,8 billion investments in renewable energies

- **Survey 2015: Slower development due to EEG-reform**
  - In 2015 40 energy cooperatives have been founded. With that decreases the number of newly established cooperatives by 25% compared to the previous year.
  - Reasons: “Economic limits for new photovoltaic projects (...) with the introduction of a **tendering procedure** a further impediment for “citizen-produced energy” has been established” (Press release, DGRV annual survey 2015)

Source: Results of the DGRV annual survey 31.12.2015

## “Stadtwerke”- 72 new foundations (2005-2012)

Total amount in Germany: more than 1000!

- Trend towards a continuous foundation of municipal energy suppliers? („Stadtwerke“):
- Between 2005 and 2012 72 municipal energy suppliers have been established

Source: Stadtwerke-Neugründungen und Rekommunalisierungen, Energieversorgung in kommunaler Verantwortung; Kurt Berlo, Oliver Wagner; 2013

# Ranking list of new electricity providers (PPS) by sales volumes in the household segment (April-Nov. 2016)

	Sales volume	Share under PPS	Sector / Category
<b>Tokyo Gas</b>	1.057.522 MWh	31,8%	Gas
<b>Osaka Gas</b>	441.092 MWh	13,3%	Gas
<b>KDDI</b>	299.796 MWh	9,0%	Mobile communication
<b>JX Energy</b>	271.114 MWh	8,2%	Oil
<b>Saisan</b>	101.485 MWh	3,1%	Gas
<b>Tokyu Power Supply</b>	89.090 MWh	2,7%	Railway company
<b>K-opticom</b>	72.872 MWh	2,2%	Subsidiary company of Kansai EPCO
<b>J:COM West</b>	71.515 MWh	2,2%	Cable television
<b>Tonen General Sekiyu</b>	55.697 MWh	1,7%	Oil
<b>SB Power (Softbank)</b>	50.139 MWh	1,5%	Mobile communication
<b>Restliche Stromanbieter</b>	812.680 MWh	~24,5%	-

Source: Eigene Darstellung von Robin Goeßmann; Die Liberalisierung des japanischen Strommarktes nach dem Atomunfall von Fukushima/ Hintergründe, Auswirkungen/ Rahmenbedingungen; Masterarbeit 2017; Daten entnommen aus: METI (2017b: Internet)

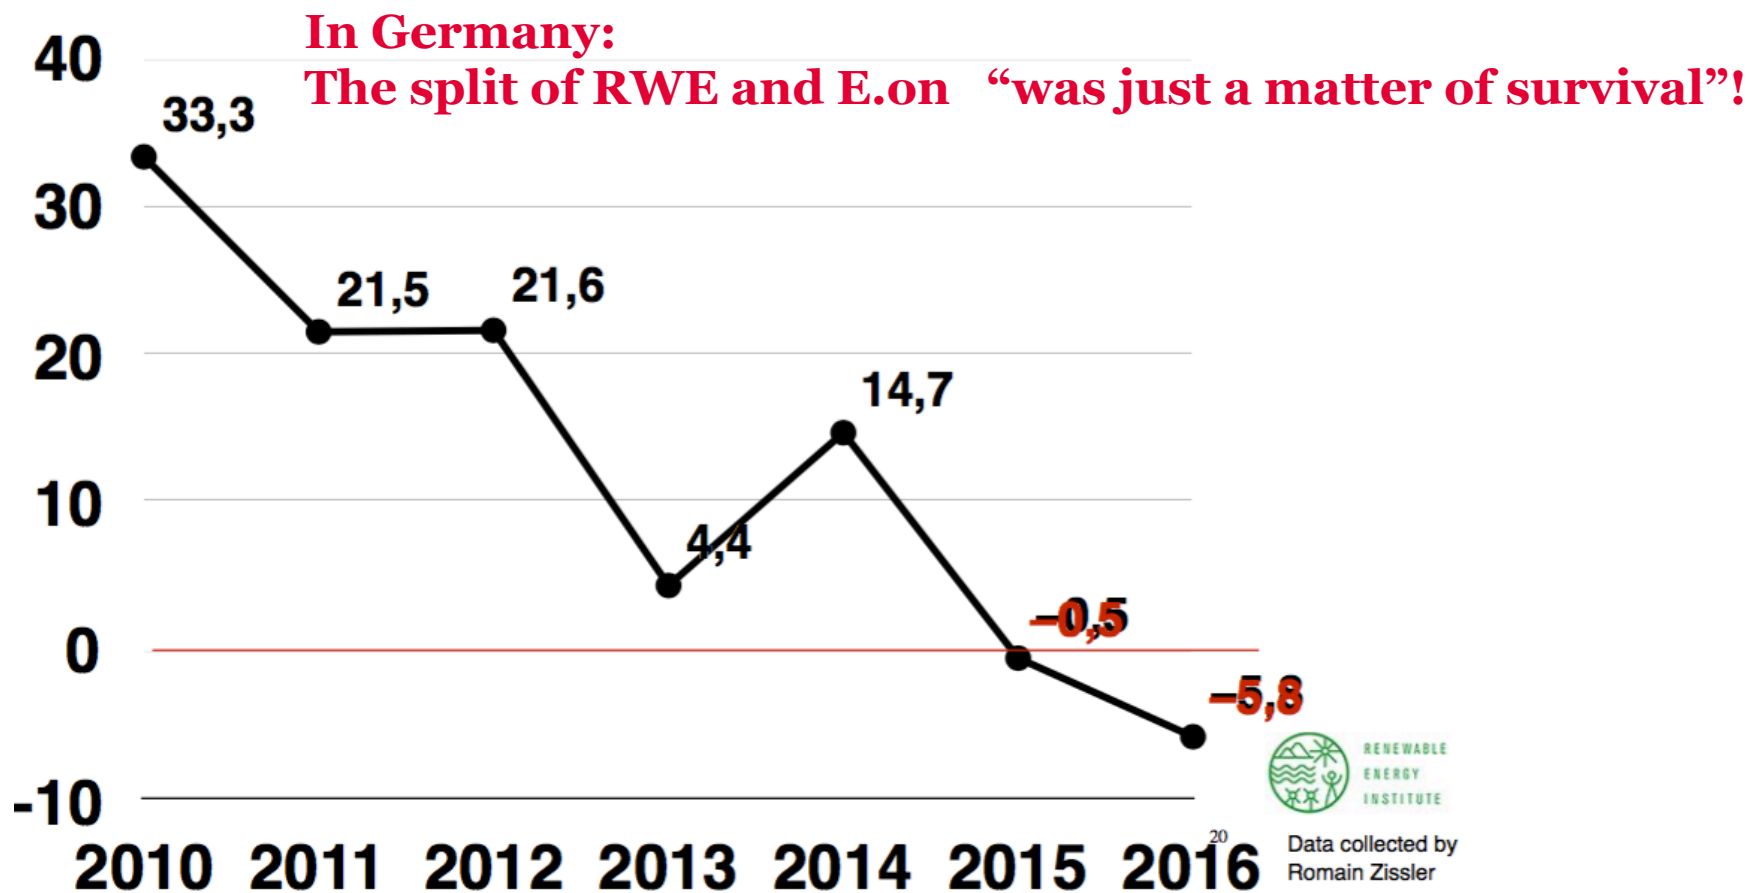

„After the Fukushima Daiichi nuclear disaster, nearly **800 PPS** companies filed documentation required by law, but **only 135 have actually supplied** any electricity, and they held only about 9 percent of the market share at the end of fiscal 2015 (i.e., March 31, 2016)“.

Source: Japan For Sustainability”, No. 171, Nov. 2016); PPS = Power producer and supplier

# State of the art: Buildings as power plants

## “Plus-energy-houses” in Freiburg/Germany

Caption: Plus energy houses are designed to produce more energy than they consume in the course of the year.

# Public opinion about the Energiewende

90%: important! But 50%: proceeds not well!

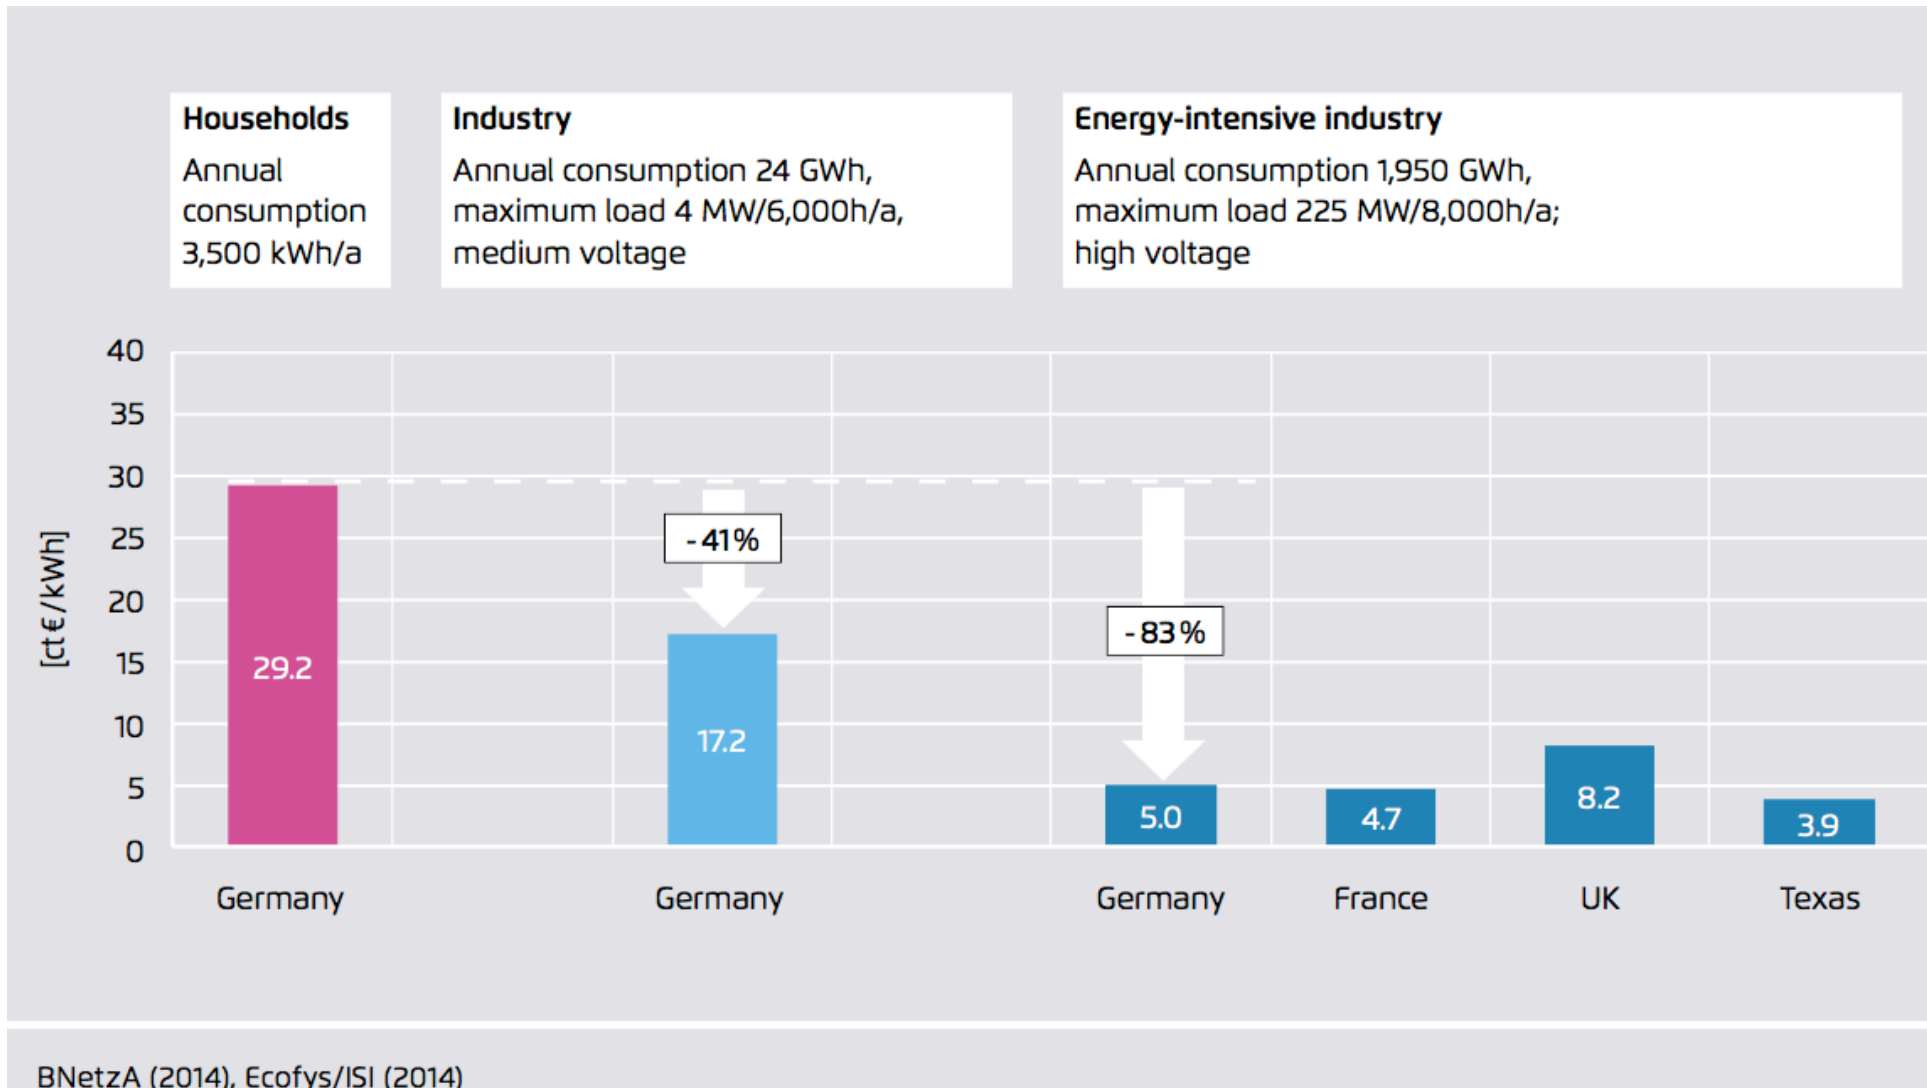

Forschungsgruppe Wahlen, commissioned by BDEW 2016

Bundespresseamt 2015, quoted from zeit.de and phasenpruefer.de

# Average electricity prices

→ expensive: households/SME – cheap: industry

# Electricity prices and consumption

- higher prices can be compensated by more efficient use!

	Annual household consumption in kWh	Electricity price in EURct/kWh	Annual electricity bill in EUR
Denmark	3,820	29.4	1,121
US	12,294	9.0	1,110
Germany ←	3,362	29.1	978
Japan ←	5,373	18.1	971
Spain	4,038	22.6	912
Canada	11,303	7.5	851
France	5,830	14.3	834
UK	4,143	17.3	717
Italy	2,485	23.3	580
Poland	1,935	15.1	291
