

Cautionary Note

The companies in which Royal Dutch Shell plc directly and indirectly owns investments are separate legal entities. In this presentation "Shell", "Shell group" and "Royal Dutch Shell" are sometimes used for convenience where references are made to Royal Dutch Shell plc and its subsidiaries in general. Likewise, the words "we", "us" and "our" are also used to refer to Royal Dutch Shell plc and its subsidiaries in general or to those who work for them. These terms are also used where no useful purpose is served by identifying the particular entity or entities. "Subsidiaries" and "Shell subsidiaries" and "Shell companies" as used in this presentation refer to entities over which Royal Dutch Shell plc either directly or indirectly has control. Entities and unincorporated arrangements over which Shell has joint control are generally referred to as "joint ventures" and "joint operations", respectively. Entities over which Shell has significant influence but neither control nor joint control are referred to as "associates". The term "Shell interest" is used for convenience to indicate the direct and/or indirect ownership interest held by Shell in an entity or unincorporated joint arrangement, after exclusion of all third-party interest.

This presentation contains forward-looking statements (within the meaning of the U.S. Private Securities Litigation Reform Act of 1995) concerning the financial condition, results of operations and businesses of Royal Dutch Shell. All statements other than statements of historical fact are, or may be deemed to be, forward-looking statements. Forward-looking statements are statements of future expectations that are based on management's current expectations and assumptions and involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those expressed or implied in these statements. Forward-looking statements include, among other things, statements concerning the potential exposure of Royal Dutch Shell to market risks and statements expressing management's expectations, beliefs, estimates, forecasts, projections and assumptions. These forward-looking statements are identified by their use of terms and phrases such as "aim", "ambition', "anticipate", "believe", "could", "estimate", "expect", "goals", "intend", "may", "objectives", "outlook", "plan", "probably", "project", "risks", "schedule", "seek", "should", "target", "will" and similar terms and phrases. There are a number of factors that could affect the future operations of Royal Dutch Shell and could cause those results to differ materially from those expressed in the forward-looking statements included in this presentation, including (without limitation): (a) price fluctuations in crude oil and natural gas; (b) changes in demand for Shell's products; (c) currency fluctuations; (d) drilling and production results; (e) reserves estimates; (f) loss of market share and industry competition; (g) environmental and physical risks; (h) risks associated with the identification of suitable potential acquisition properties and targets, and successful negotiation and completion of such transactions; (i) the risk of doing business in developing countries and countries subject to international sanctions; (j) legislative, fiscal and regulatory developments including regulatory measures addressing climate change; (k) economic and financial market conditions in various countries and regions; (I) political risks, including the risks of expropriation and renegotiation of the terms of contracts with governmental entities, delays or advancements in the approval of projects and delays in the reimbursement for shared costs; and (m) changes in trading conditions. No assurance is provided that future dividend payments will match or exceed previous dividend payments. All forward-looking statements contained in this presentation are expressly qualified in their entirety by the cautionary statements contained or referred to in this section. Readers should not place undue reliance on forward-looking statements. Additional risk factors that may affect future results are contained in Royal Dutch Shell's Form 20-F for the year ended December 31, 2017 (available at www.shell.com/investor and www.sec.gov). These risk factors also expressly qualify all forward-looking statements contained in this presentation and should be considered by the reader. Each forward-looking statement speaks only as of the date of this presentation, March 13 & 14, 2019. Neither Royal Dutch Shell plc nor any of its subsidiaries undertake any obligation to publicly update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this presentation. We may have used certain terms, such as resources, in this presentation that the United States Securities and Exchange Commission (SEC) strictly prohibits us from including in our filings with the SEC. U.S. Investors are urged to consider closely the disclosure in our Form 20-F, File No 1-32575, available on the SEC website www.sec.gov.

Growing recognition of the role of gas and LNG as the world tackles poor air quality and climate change

Asian LNG imports exceed expectations again in 2018 absorbing continued supply growth

Near term supply growth expected to be absorbed by Europe and Asia – continued need for investment in supply to meet long-term demand growth

Growing recognition of the role of gas and LNG as the world tackles poor air quality and climate change

The energy challenge

Growing population

According to United Nations estimates, the current world population of 7.6 billion is expected to reach 8.6 billion in 2030, 9.7 billion in 2050 and 11.2 billion in 2100. Nearly a billion people still live without electricity while another billion struggle with unreliable supplies of electricity.

Rising demand

By 2070 the world is likely to be using at least 50% more energy than it does today as population grows and people seek to improve their quality of life.

Need for energy solutions

According to the International Energy Agency (IEA), renewable generation is expected to underpin the growth of electricity from 18% to 50% of energy supply by 2050. The remaining energy demand that is difficult to electrify will still require cleaner solutions.

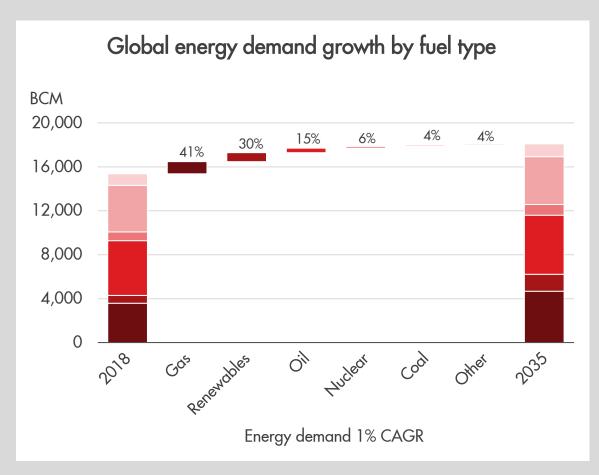

Mitigating climate change

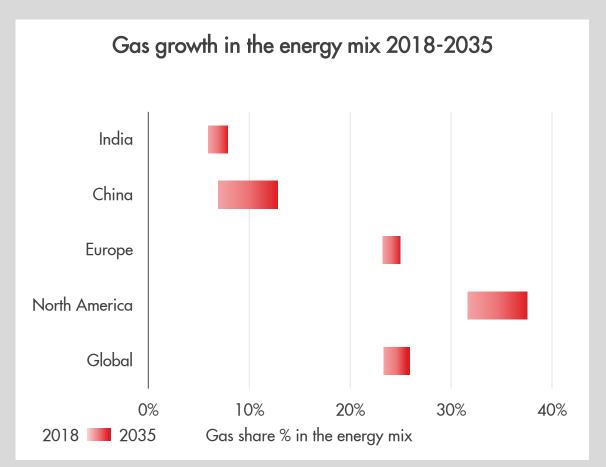

The world currently emits 33 billion tonnes of energy-related CO₂ each year. To limit the rise in global temperature to 2°C, the IEA has calculated that energy related CO₂ emissions need to fall to around 18 billion tonnes a year by 2040. The challenge is not just to reduce emissions, but to do this while providing more reliable energy supplies.

Improving air quality

Updated World Health
Organization (WHO) estimates
reveal an alarming death toll of
7 million people every year
caused by outdoor and household
air pollution. According to WHO,
global air pollution is linked to
inefficient energy use in every
sector of human activity including
coal-fired power plants, industry,
agriculture and transport.

Gas and renewables to play a critical role in meeting the energy challenge

New countries choosing LNG for various benefits

- Natural gas meets over half of total energy demand
- Declining domestic gas production
- LNG meeting existing and new gas demand

- Replacing oil-fired power generation
- Complement renewable power generation
- Strategic location of Panama Canal offers opportunities for LNG bunkering

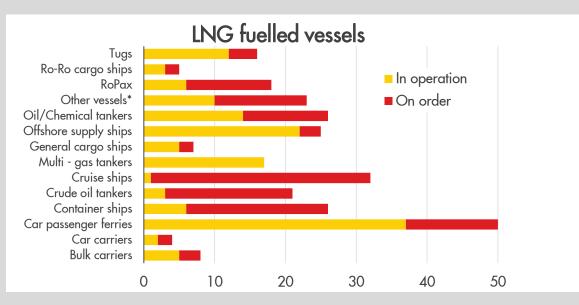

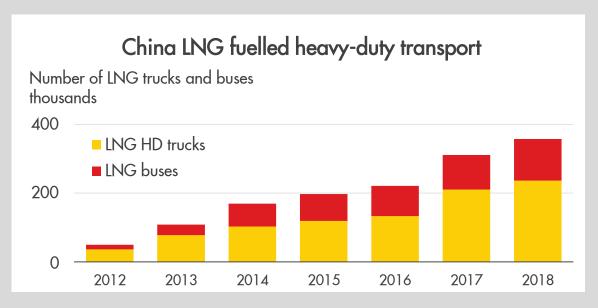

- Replacing oil-fired power generation
- Innovative small-scale LNG solution
- Increases diversity of supply

China and India can double import infrastructure in 5 years

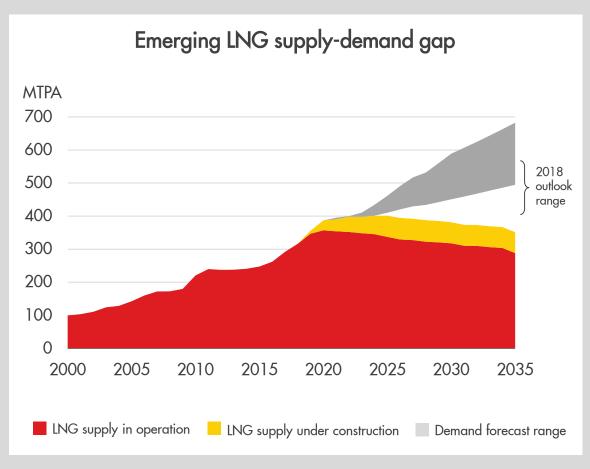

Source: Shell interpretation of IHS Markit Q4 2018 data

Supply investment still needed to meet continued LNG demand growth

Source: Shell interpretation of IHS Markit, Wood Mackenzie, FGE and Poten & Partners Q4 2018 data

Growing recognition of the role of gas and LNG as the world tackles poor air quality and climate change

- Gas to supply the largest share of energy demand growth, supplying over 40% of additional demand by 2035
- Coal-to-gas switching led to 78% improvement in Beijing winter air quality over the last five years

Asian LNG imports exceed expectations again in 2018 absorbing continued supply growth

- China became the world's largest gas importer, with LNG imports doubling over two years
- JKM futures trading volume increased ten-fold since 2016

Near term supply growth expected to be absorbed by Europe and Asia – continued need for investment in supply to meet long-term demand growth

- 35 MT additional supply expected in 2019
- 2018 saw final investment decisions on 21 MT of new capacity compared to a total of 7 MT in the last two years combined
